

Get cited by Google's AI Overviews — and every answer engine your prospects actually use.

For your business to be recommended by Google's AI Overviews and answer engines like ChatGPT, Perplexity, Gemini, Grok, DeepSeek and Claude, it needs structured data, AI visibility files, and FAQ + help content that teach AI how to answer your prospects' questions. AE Optimizer builds all of it for you — no developer, no agency, no \$3,000/month retainer.

Google has always been AI. People just noticed.

Ranking blue links isn't the game anymore. Google's AI Overviews, ChatGPT, Perplexity, Gemini, Grok, DeepSeek and Claude answer your prospect's question before they ever reach your website. If AI can't read your business as a structured entity, it can't cite you — and the sale goes to whoever it does cite.

Traditional SEO optimizes pages for humans scanning results. Answer Engine Optimization optimizes your entire business as a machine-readable entity: schema, knowledge graph, FAQ + help content, speakable markup, and a distributed authority network that AI models trust and quote.

18 layers that make your business citable.

Every layer is generated for you — no developer, no agency retainer.

01

The Foundation — Root Site Files

robots.txt, llms.txt, ai-sitemap.xml, humans.txt, security.txt, full-context.md and publishing-manifest.json so every crawler and LLM knows what you offer.

02

Per-Page JSON-LD Schema

Unique schema stamped on every URL — Organization, LocalBusiness, Service, WebPage, BreadcrumbList and more.

03

Speakable Schema for Voice Search

Marks the exact sentences Siri, Alexa and Google Assistant are allowed to read aloud.

04

Entity File & Knowledge Graph

A canonical entity.json that defines who you are, what you sell, who you serve and where.

05

Organization Schema

The trust spine — telephone, sameAs, areaServed and offer catalog in one signed object.

06

Service Schema

Each service published as its own SoftwareApplication / Service node with descriptions AI can lift verbatim.

07

Team Members Schema

Person schema with credentials and roles so AI can attribute expertise.

08

Testimonials & Reviews Schema

Structured social proof AI Overviews reward.

09

FAQ Schema

Answers written in the shape LLMs quote.

10

Source-Backed Topic Research

Stat-based content with 'Prioritize statistics & data points' on by default — the exact format AI Overviews cite.

11

Keyword Recommendations

Surfaces low-competition, high-intent questions your prospects are already asking.

12

Competitive Question Gaps

The questions your competitors haven't answered yet.

13

Unanswered Q&As; from Google

Research and generate answers that qualify for AI Overviews and snippets.

14

Help Articles

Long-form, service-specific and topic-specific guides — with speakable variants.

15

HTML Accordion Site Pages

AI-crawable yet human-readable pages for every service, city, FAQ and topic.

16

AI-Crawable Website via GitHub Pages

Publishes a mirror site AI bots freely crawl, indexed and linked back to you.

17

Perplexity Sonar Research

Live model-grounded research so answers cite current sources, not stale training data.

18

AI Distribution & Authority Network

12 nodes carry your entity across the open web — the Core of the Offer.

Four things that separate AE Optimizer from typical AEO agencies.

Most AEO agencies sell you reports and rankings. AE Optimizer ships the infrastructure AI models actually read — and you own every file.

- 01

Infrastructure, not rankings
Agencies chase keyword positions. We build the schema, entity graph and speakable content that determines whether AI can cite your business at all. Rankings follow infrastructure — not the other way around.

- 02

Assets, not reports
You get files: JSON-LD, entity.json, llms.txt, help articles, FAQ pages, an AI-crawlable mirror site. Not a slide deck telling you what someone else should do.

- 03

Ownership, not lock-in
Everything the software produces is yours forever. Cancel and keep the files. Try that with a \$3,000/month retainer.

- 04

No developer, no agency, no retainer
The tasks agencies charge thousands for — schema generation, entity distribution, GitHub Pages mirroring, Perplexity-grounded research — run inside the app in minutes.

The AI Authority Network

12 Nodes of Global Trust

Publishing schema on your own domain isn't enough. AI models weigh corroboration across independent, high-trust sources. AE Optimizer mirrors your business facts — services, locations, FAQs, entity graph — across 12 nodes that appear inside the datasets modern LLMs are trained on and grounded in.

THE CITATION LOOP

Publish Mirror across 12 nodes AI trains & grounds on it AI cites your business Prospect lands on you.

NODE 01

GitHub Repositories

Public repos containing your entity files, JSON-LD, and llms.txt — indexed by every code-aware model.

NODE 02

GitHub Pages Mirror

An AI-crawlable, human-readable mirror site on a github.io subdomain that inherits GitHub's domain authority.

NODE 03

Hugging Face Datasets

Your entity + FAQ corpus published as a dataset card — read by open-source LLM pipelines.

NODE 04

Kaggle Datasets

Same corpus mirrored on Kaggle for data-science-adjacent training pulls.

NODE 05

Internet Archive

Timestamped snapshots of your canonical pages so AI can verify facts against a historical record.

NODE 06

Crunchbase Entity

Structured organization data in a source LLMs treat as canonical for company facts.

NODE 07

LinkedIn Company Presence

Corroborates people, roles and services with a high-trust professional graph.

NODE 08

YouTube Channel Schema

VideoObject markup that ties multimedia proof to the same entity ID.

NODE 09

X (Twitter) sameAs

Cross-links your entity to real-time social signal LLMs sample.

NODE 10

Perplexity-Grounded Publishing

Content researched via Perplexity Sonar so citations point back at your own sources.

NODE 11

Public Knowledge Graph Files

Machine-readable knowledge-graph.json distributed to open indices.

NODE 12

Cross-Node sameAs Web

Every node links to every other node — the reciprocal graph AI models score as authority.

Instant trust transfer.

The moment your entity ships to these 12 nodes, it borrows the crawl priority, indexation cadence, and dataset inclusion that took each of those platforms years to earn. Your business becomes a fact AI models can corroborate — the single hardest thing to fake in modern search.

Simple pricing. Own everything you generate.

Toggle Monthly for ongoing generation, or Pay Once & Own for a lifetime license.

TIER	MONTHLY	ONE-TIME	BEST FOR
Starter	\$97/mo	\$247	Single business getting AI-visible for the first time.
Growth	\$147/mo	\$497	Scaling brand adding help articles, FAQs and speakable content.
Authority Max	\$247/mo	\$747	Full 12-node Authority Network + Perplexity-grounded research.

Every tier ships the full 18-layer content engine. Higher tiers unlock more clients, more services, and the full 12-node authority network.

Questions we hear most.

Do I need to be technical?

No. AE Optimizer generates every file — schema, entity graph, FAQ pages, help articles, root site files — and publishes them for you. You review and approve.

Will this replace my SEO?

It complements it. Traditional SEO still matters for humans clicking blue links. AE Optimizer covers the AI layer — the answers Overviews, ChatGPT, Perplexity, Gemini and Claude read to your prospects.

Which AI engines are supported?

Google AI Overviews first, then ChatGPT, Perplexity, Google Gemini, Grok, DeepSeek and Claude. Anywhere your prospects ask questions.

Do I own the files?

Yes. Everything the software generates is yours to keep — even if you cancel.

How is this different from an AEO agency?

Agencies deliver reports and retainers. AE Optimizer delivers the infrastructure itself — schema, entity mirroring across 12 authority nodes, and citable content — for a fraction of the cost.

How fast will I see citations?

AI Overview citations typically begin appearing within weeks of publishing to the 12-node authority network, as crawlers and training pipelines pick up the corroborated entity.
